

# Strategic Objectives and Levels of Strategy

by Sophia

## WHAT'S COVERED

In this lesson, you will learn about strategic objectives, levels of strategy, and grand strategy. You will also learn how they are related. Specifically, this lesson will cover:

1. Strategic Objectives
2. Levels of Strategies
3. The Grand Strategy
- 3a. Operationalizing a Grand Strategy

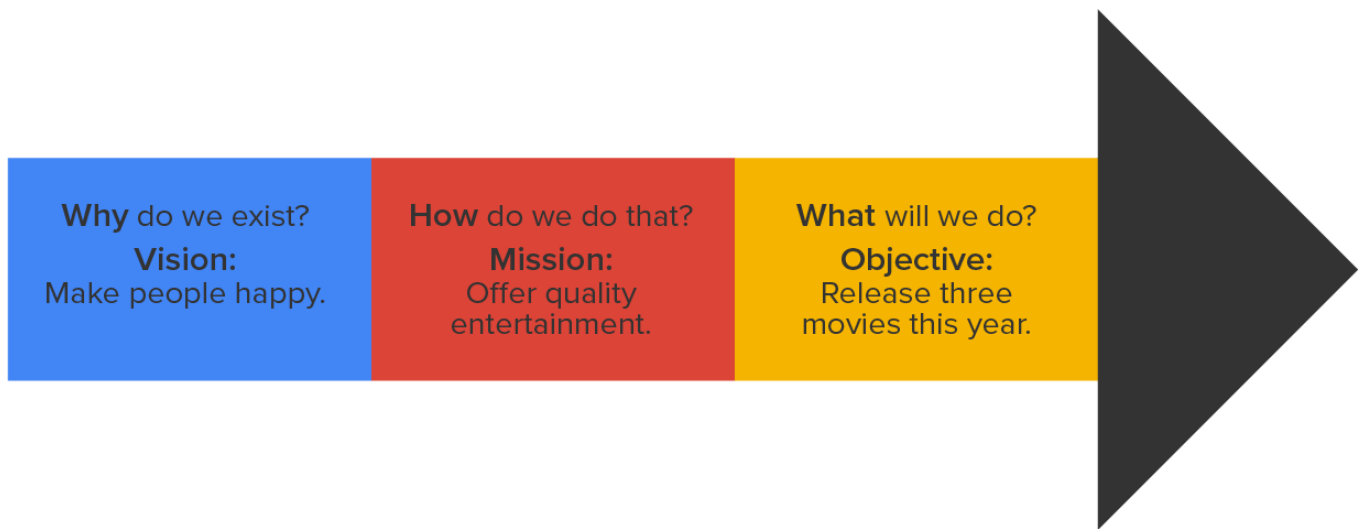

## BEFORE YOU START

Once a strategic analysis has been completed, the next step in the strategy process is to establish strategic objectives. At this point, the manager has decided why the company exists and how it will try to fulfill its mission. Strategic analysis has provided information about customer preferences, competitors, and the firm's resources and capabilities. Now it is time to start planning for success.

## 1. Strategic Objectives

**Strategic objectives** are the big-picture goals for an organization. They describe what the company will do to fulfill its mission. Strategic objectives are usually some sort of performance goal—for example, to launch a new product, increase profitability, or grow market share for the company's product.

The diagram below shows what might be some strategic objectives for Disney. To make people happy (Disney's vision), Disney focuses on entertainment (its mission). Top executives then decide each year what entertainment products the company will offer. Because Disney is a large corporation, it has a variety of resources available to create entertainment products to offer. For example, they may decide to release three movies this year, as well as build a new theme park and create five new shows for their television network. In reality, the strategic objectives at Disney are much more complex than this, because some of these choices involve long-term efforts (e.g., they cannot build a theme park in one year).

#### TERM TO KNOW

#### Strategic Objectives

The big-picture goals for the company: what the company will do to try to fulfill its mission.

## 2. Levels of Strategies

Once a firm has set its objectives, it then must turn to the question of how it will achieve them. A **business-level strategy** is the framework a firm uses to organize its activities, and it is developed by the firm's top managers. Examples of business-level strategies include cost leadership and differentiation. These strategies are pursued by businesses with a single product or a range of products.

#### THINK ABOUT IT

Imagine that you own a coffee shop. You aren't Starbucks—you are a local shop in your neighborhood, and you run it yourself. You have employees, but you are the manager, owner, and all-around decision maker. While developing your vision and mission statements, you have already made some basic decisions about how your shop will operate. For example, you have chosen to either offer quick, inexpensive coffee (cost leadership) or a full-service coffee experience (differentiation). That decision impacts whether or not you choose premium or discount suppliers, how your shop is decorated, and how many employees you must have to serve customers.

A business-level strategy guides a company in how they approach the activities in the value chain. Operations, for example, would focus on efficiency for a cost leader and focus on adding value for a differentiator.

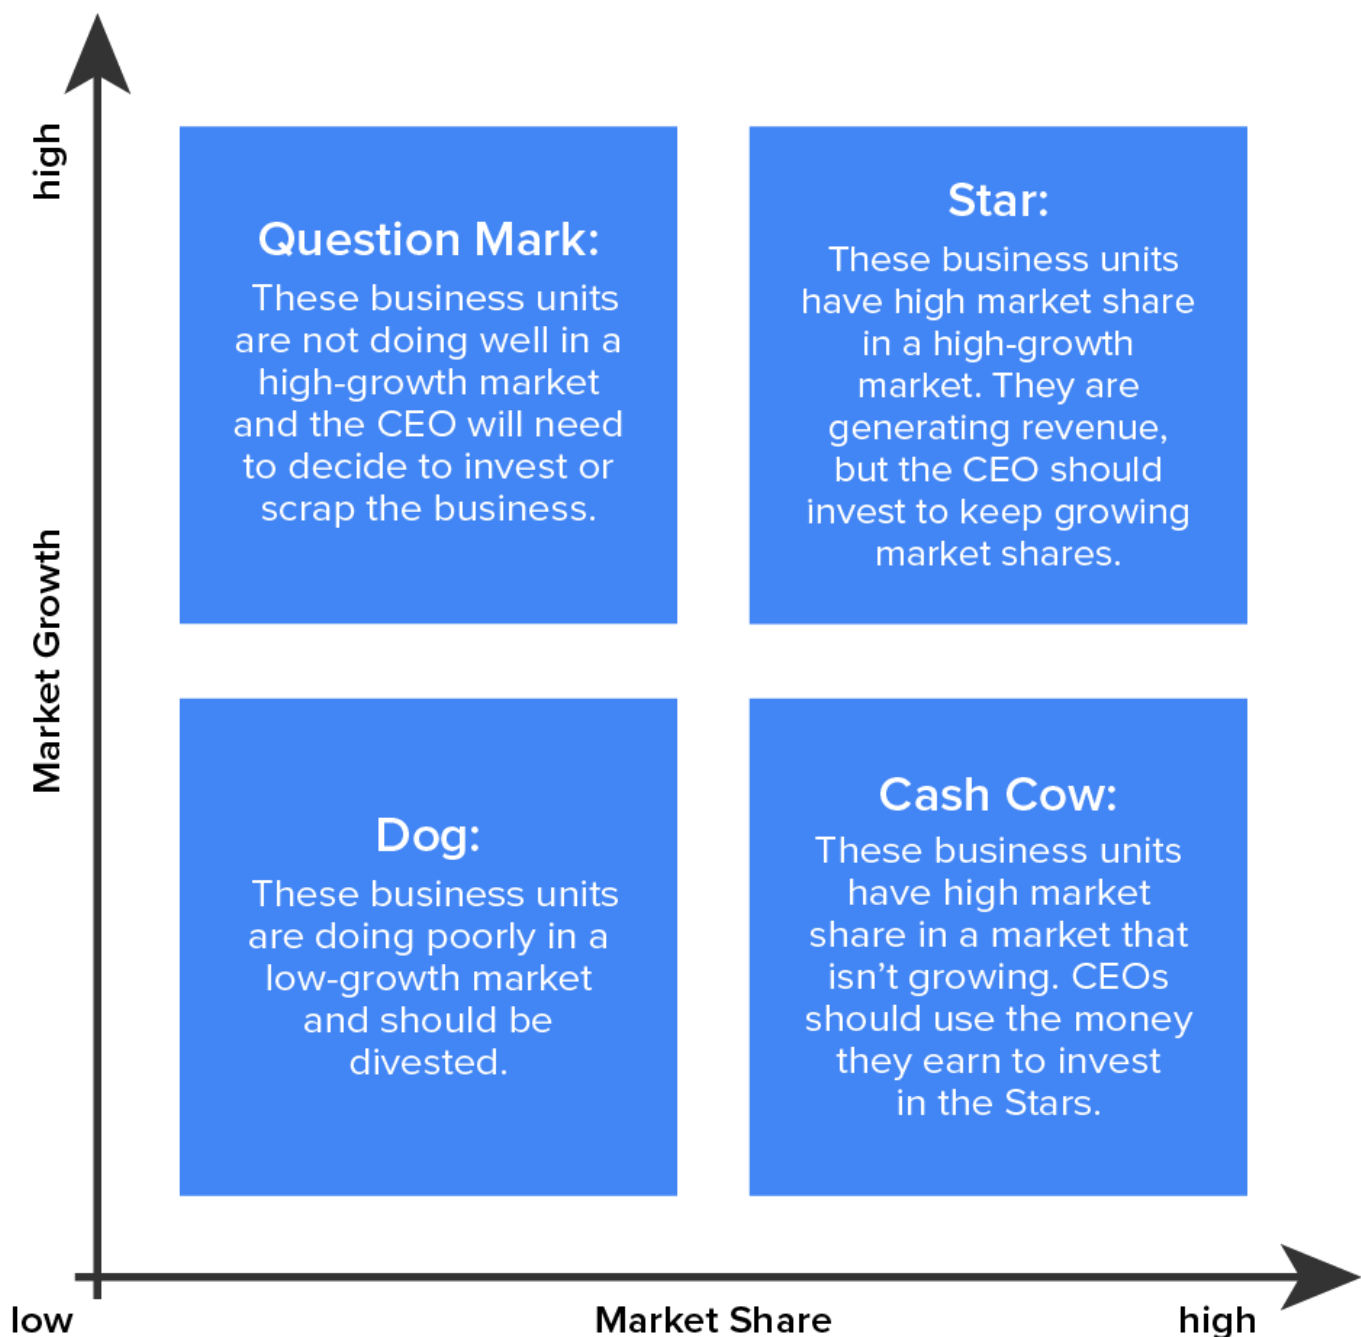

When you develop strategic objectives for your shop, you will decide whether or not you want to try to attract more customers (grow), maintain your business at its current level, or shrink your business (perhaps you feel you don't have enough time to spend with your family). If you decide that your objective is to grow, for example, you should set a specific target, say, to grow revenue by 10%. Once you set that specific objective, you can determine exactly what business-level actions you will need to take to reach that target.

Even if a business is much larger than a local coffee shop, the strategic objectives pursued by these larger companies are not significantly different in concept. Large companies like Nike or Apple, which have many different business units, develop strategies at several levels. Each individual business unit (say Nike Basketball) will have a manager who decides the objectives for that unit, just as in the coffee shop example. However, the company as a whole will have a chief executive officer (the top manager for the company) who develops strategy for the entire corporation. **Corporate strategy** is the broadest level of strategy, and is concerned with decisions about growing, maintaining, or shrinking very large companies. At this level, business-level strategy activities, such as an advertising campaign to attract new customers for a single product line, are not going to be enough to significantly impact the company as a whole.

The corporate CEO essentially manages a group of businesses (unless the firm operates as one business unit) and develops strategies to create success for the overall group. Think of the group of businesses as an investment portfolio: investors try to have a diverse set of investments to spread risk and maximize the performance of the overall portfolio. On any given day, an investment that isn't doing so well should be offset by one that is doing well. Corporate strategy tries to achieve the same thing, and CEOs have to weigh the pros and cons of each business unit and how it is contributing to the success of the overall corporation.

⇒ **EXAMPLE** A company that has business units that do well in the winter (ski resorts) will try to also have business units that will perform in the summer (swimming pools) to reduce the risk of having periods of low revenue.

One tool that corporate strategists use to understand how each of their businesses contributes to the corporation as a whole is the BCG Matrix, illustrated in the diagram below.

The **BCG Matrix** gives managers a quick picture of which business units are doing well and which are not. The tool has recommendations for businesses in each quadrant—for example, a business in the dog quadrant should be sold or closed. Cash cows provide income to the corporation, and stars provide growth. A CEO is always trying to balance the group of business units throughout the quadrants to maximize overall corporate performance. Note that the BCG Matrix is not applicable for firms that operate in one business unit.

In order to achieve the scale of growth necessary to meet corporate strategic objectives, a CEO may have to find ways to develop entirely new business units or reach brand-new markets. CEOs have several ways of growing their companies, as shown in the following table that describes how grand strategies are translated into objectives and actions.

Level of Strategy	Grand Strategy	Strategic Objective	Potential Action
Business-Level Strategy	Growth	Increase business revenue by 25%	<ul style="list-style-type: none"> <li>• Introduce a new product</li> <li>• Expand to a new location</li> </ul>
Corporate-Level Strategy	Growth	Increase corporate revenue by 10%	<ul style="list-style-type: none"> <li>• Acquire a competitor</li> <li>• Expand to a new country</li> <li>• Develop a business in a new industry</li> </ul>
International Strategy	Growth	Attract 10% overall market share in a new country	<ul style="list-style-type: none"> <li>• Export products to that country</li> <li>• Acquire a local company in that country to gain their customers</li> </ul>

**International strategy** is similar to corporate strategy because it is concerned with the large-scale actions involved in entering a brand-new geographic market. For companies operating internationally, strategic questions focus on how to successfully enter and compete in a foreign market. International strategy can combine with business-level or corporate-level strategies because a growth strategy at either scale can involve entering new markets in order to reach new customers.

⇒ **EXAMPLE** It can help to think of the level of strategy as a dartboard, with business strategy for local actions at the center, with the next ring corresponding to the corporate strategy, and finally, for the outer ring, the international strategy that focuses on large-scale actions.

#### TERMS TO KNOW

##### **Business-level Strategy**

Ways that single-product firms organize their activities to succeed against rivals; at this level, include cost leadership and differentiation.

##### **Corporate Strategy**

The broadest level of strategy, concerned with decisions about growing, maintaining, or shrinking very large companies.

##### **BCG Matrix**

A tool used to evaluate the various business units in a corporation.

##### **International Strategy**

The level of strategy concerned with the large-scale actions involved in entering a brand-new geographic market.

## 3. The Grand Strategy

At all three levels, companies choose a **grand strategy** in response to the first question they should ask themselves: does the firm want to grow, strive for stability, or take a defensive position in the marketplace? Often, the choice of a grand strategy is based on conditions in the business environment because firms generally want to grow unless something (like a recession) makes that difficult. Note that a grand strategy and a corporate strategy can overlap significantly.

- A **growth strategy** involves developing plans to increase the size of the firm in terms of revenue, market share, or geographic reach (often a combination of these, as they can overlap significantly).
- A **stability strategy** is a strategy for a company to maintain its current income, market share, or geographic reach. A firm usually works to maintain a stable position when the alternative is to lose ground in one of those categories—for example, because of competition or economic factors. In today's business environment, publicly held firms rarely aim solely to maintain the status quo, because shareholders and the stock market reward firm growth.
- Firms pursue **defensive strategies** in the face of challenges. A company that is struggling may decide to shrink its operations to reduce costs in order to survive, for example. A company facing strong new competition may have to radically rethink its product offerings or pricing in order not to lose too much market share to the newcomer. A technological innovation may make a company's products obsolete (or at least less attractive), forcing it to work to catch up to the new technology. Ford made a defensive decision when it recently decided to stop selling sedans in the United States because of slow sales compared to trucks and SUVs.

#### TERMS TO KNOW

##### **Grand Strategy**

Overall business strategy of an organization.

##### **Growth Strategy**

A grand strategy to increase the size of the firm in terms of revenue, market share, geographic reach, or a combination of these elements.

##### **Stability Strategy**

A grand strategy for a company that wants to maintain its current income, market share, or geographic reach.

##### **Defensive Strategy**

A grand strategy pursued by companies facing challenges.

### **3a. Operationalizing a Grand Strategy**

A firm operationalizes its choice of a grand strategy differently at each level of strategy (business, corporate, international). At the business level, a growth strategy means that the manager will have to develop ways to grow the business by developing new products or expanding the customer base for existing products, either at home or abroad. Expanding a company can take a wider variety of forms. The CEO can develop new businesses, expand to new countries, acquire or merge with competitors, or perform previously outsourced activities. International expansion can be accomplished by exporting goods to another country or by acquiring a similar firm in another country to establish the company's presence in that country. In all three of these cases,

the grand strategy would be growth, and the strategic objectives could be expressed in terms of revenue growth, profit growth, market share growth, or even share price growth. The table in the previous section outlines how a grand strategy can be used to develop specific company actions.

## REFLECT

1. What is the difference between strategic objectives and a strategy?
2. Describe the three levels of strategy and what a manager developing strategy at each level is concerned with.
3. What is a grand strategy, and how does it relate to strategic objectives and the three levels of strategy?
4. What are the three grand strategies, and why would firms pursue each of them?

## SUMMARY

In this lesson, you learned about strategic objectives, levels of strategy, and grand strategy, as well as how they are related. You learned that **strategic objectives** are the big-picture goals—usually some sort of performance goal—for an organization, describing what the company will do to fulfill its mission. Once a firm has set its objectives, it may use different **levels of strategies** to achieve them, such as a business-level strategy, which guides a company in how they approach the activities in the value chain; a corporate strategy, which is concerned with decisions about growing, maintaining, or shrinking very large companies; or an international strategy, which is concerned with the large-scale actions involved in entering a brand-new geographic market. Corporations with multiple business units can use a tool called the BCG Matrix to evaluate which are doing well and which are not. Lastly, you learned that at all three levels, companies choose a **grand strategy** in response to whether they want to grow, strive for stability, or take a defensive position in the marketplace. A firm will **operationalize its grand strategy** differently at each level of strategy (business, corporate, international).

Best of luck in your learning!

## TERMS TO KNOW

### BCG Matrix

A tool used to evaluate the various business units in a corporation.

### Business-level Strategy

Ways that single-product firms organize their activities to succeed against rivals; at this level, include cost leadership and differentiation.

### Defensive Strategies

A grand strategy pursued by companies facing challenges.

**Grand Strategy**

Overall business strategy of an organization.

**Growth Strategy**

A grand strategy to increase the size of the firm in terms of revenue, market share, geographic reach, or a combination of these elements.

**International Strategy**

The level of strategy concerned with the large-scale actions involved in entering a brand-new geographic market.

**Stability Strategy**

A grand strategy for a company that wants to maintain its current income, market share, or geographic reach.

**Strategic Objectives**

The big-picture goals for the company: what the company will do to try to fulfill its mission.
